Why backup cloud services?

One third of companies using cloud-based services are losing data, mostly due to employee errors. Cloud service providers don't cover data loss due to that kind of accidents, or to major data disasters and hacker attacks.

How does it work?

Cloudfinder offers daily, automated backup, storing all older versions in the Cloudfinder SafeHaven vault. With the search-driven interface it is easy to find, restore, export, migrate and analyze the backed up information.

Why Cloudfinder?

It's about the ease of search and restore, and the fact that Cloudfinder is the only backup provider to offer content search, search in all previous versions, search across all accounts and search across multiple sources.

How can you get started?

Sign up for a free trial and create a Cloudfinder account. You get unlimited storage of Google Docs & Drive, Gmail, Calendar, Contacts and Sites.

About us

Cloudfinder has quickly become an international leader in cloud-to-cloud backup services. The company's mission is to combine absolute data security across all cloud platforms with the market's most intuitive information overview, search and retrieval capabilities.
